## AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at page 23, line 6 and ending on page 23, line 13, with the following rewritten paragraph:

The event applet adapter 320 provides a remote interface through which the visualizer 312 may receive events. The event applet adapter 320 may be digitally signed so that the applet may execute outside the Java "security sandbox" and has the necessary privileges to expose a server interface. As understood in the art, a digital code signing certificate may be obtained from a company named Verisign via http://www.verisign.com and stored on the storage unit 114 of the client computing system 102. The certificate may be used during development of the event applet adapter to digitally sign in to prepare for its deployment.
